SET UP LICENSE

FOR MAC OS

HOW DO YOU SET UP THE LICENSE?

1. Start Stata and have your license and activation key ready.

License and Activation Key **Stata Software**

This License and Activation Key is an *important* document. Three pieces of information on this document — the serial number, code, and authorization — will be required during the installation process of the software you have licensed from StataCorp LLC ("StataCorp"), as further described below.

This document is valuable proof of purchase for your software license. You should store this document in a safe place for record keeping.

Licensed software: StataNow/MP 19.5 (4 cores)
License type: Single-user
License term: Expires 07/17/2027
Serial number:
Code:
Authorization:

You must fill in all fields in the Initialize License dialog box before you can continue. The code and authorization are not case-sensitive. If you make an error when entering the codes, you will be prompted to try again.

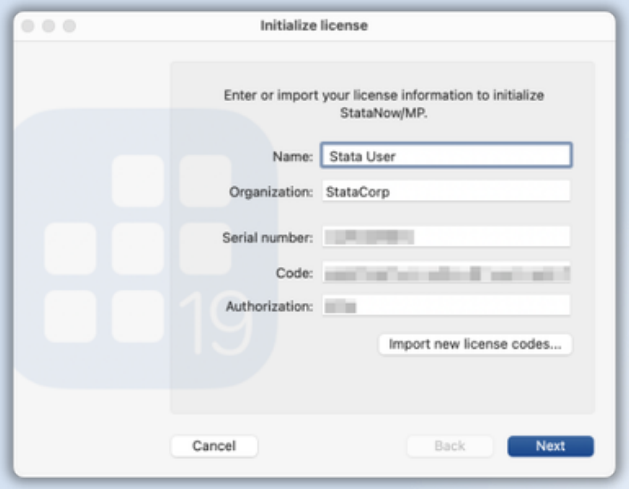

2. Enter your name (at least five characters) and your organization (at least five characters).

You can then either select Import new license codes... to import your .stcodes file, or enter the serial number, code, and authorization from the License and Activation Key you received from StataCorp. If you enter the information manually, we recommend copying and pasting it.

Set up Stata license

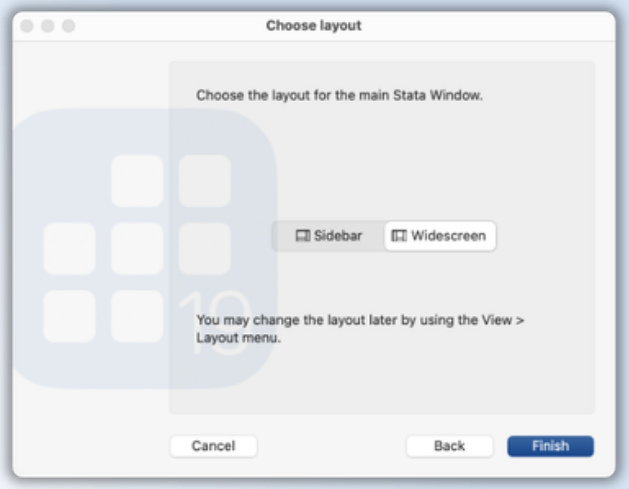

3. Click **Next** to submit your information.

4. Then click **Next** to complete the installation and register Stata.

5. Select a window layout for Stata and click **Finish**.

6. Stata will start and ask whether you want to check for updates. We recommend selecting **Check for updates now** to make sure you have the latest version, and then clicking **OK**.
